

**Investigative Outbreak Report. Dynamical Fever**

**Problem:** A disease called Dynamical Fever (DF) causes near-annual outbreaks in dogs and people in Paris. DF became a reportable disease in Paris in 2017, a veterinary vaccine became available in 2019 and a human vaccine in 2022. Investigate the available case data from 2017-2024 in order to advise the Ministry of Health on the most effective human/dog vaccination policy to adopt in 2025 to promote elimination of DF in all populations.
